## **EXECUTIVE SUMMARY**

Tapclone is pleased to provide proposal for ecommerce website . This represents an order of magnitude for the project and it does not represent a statement of work from Tapclone.

Based on the discussions and high-level understanding of requirements, Tapclone have derived solutions to all business challenges the client sought out to resolve. More detailed discovery of requirements and technical environment will enable us to validate and refine these solutions.

Our approach to this opportunity will be structured according to our implementation in agile methodology; we have assumed that the majority of design and implementation work would be performed by Tapclone. We believe our approach and credentials will clearly demonstrate key points of differentiation for Tapclone to deliver high quality solutions. Tapclone look forward to working with you on this project.

---

## **COMPANY PROFILE**

Tapclone is a Global IT services company providing Technology consulting, Custom Application Development, Enterprise Mobility, Open Source Web Development, ERP and Enterprise CMS.

Tapclone is a global IT services company headquarters at Cochin, that enhances the value of its client's investments by using well-defined processes and best practices to align information technology (IT) with the business strategy. We deliver services and solutions to clients in the commercial and non-profits sectors. Tapclone started its operations in Cochin, India.

The company was formed to provide organizations with a partner that could cater to all their information technology needs, as well as to provide associates with a passion for information technology, a place where they could meet their intellectual and professional aspirations.

Tapclone initially focused on providing professional consulting in ERP, Enterprise Mobility and Web technologies to commercial sector across World. Leveraging its success in commercial space.

### **Key Success**

- Strong management, ethical practices, healthy cash flow, proven track record
- Well defined process and work flow
- Constant internal training on technology, process and communication
- Dedicated R&D team focused on staying abreast of emerging technologies

## **SCOPE OF THE WORK**

The application will list all colleges and courses along with online class modules. The application will allow users to search for colleges or courses, register, and avail of their courses. The application will also have a mobile app for students to view the course details which are hosted on the website. The application will run on both IOS and Android.

What do we do for you?

- Website UI/UX design & development.
- Mobile application development.
- Testing and implementation.
